Assignment #6

XML

Due 3/30/09, in class

Assignment

Repeat Assignment 5 with the following changes.

- (1) Rather than building an XHTML page, build and return a valid XML document. In addition to describing the data, this XML document should refer to a cascading style sheet that specifies the format of each entry. Initially, the style sheet can be either static or dynamic.
- (2) Use more fun colors.

What to hand in

- (1) A 2-up copy of your web page (front and back ends) include examples of any dynamically generated documents and files.
- (2) A screen shot of the **validator** successfully validating an instance of your returned XML document.

Notes

- (1) Focus on learning new things about Perl programming. For example, if you have not done so already, start using `CGI.pm`.
- (2) For this assignment you again get to work alone.
- (3) `man xpaint[1]`.
- (4) Color my world. http://perl.wikia.com/wiki/Named_colors
