
CS 482, Spring 2009
Assignment #1
Catch Me If You Can

Due 2/2/09, in class

Quick pick a Testing Technique

In this assignment you will research a testing technique, and then write a no-more-than-two-page paper and give a talk on what you learned. You are free to pick whatever testing technique interests you, but everyone must have a different technique so they are first-come first-serve (order determined by the order emails arrive in my inbox).

Your paper should be a detailed technical summary. You only get two pages, so put some thought into what you want to say. Pragmatics: font no smaller than 10pt times-roman with 1.4 lines spacing. Larger is ok, but will give you less of a chance to convey your deep technical understanding.

You will present your testing technique to the class in a fifteen minuet talk. Do practice this *out loud* before giving it to the class. If you want you can provide a one page handout to support your talk.

What to hand in

- (1) Your two page paper.
- (2) The handout used in you talk (if your create one).
- (3) Email your paper, the handout, and the slides from your talk.

Notes

- (1) Talks will be in class on 4 February 2009.
